Evidence of Life

Your personal life OS — capture, reflect, and rediscover your days.

LEAVE-BEHIND DECK · DEMO DAY 2026

The way we remember our lives has broken.

Before smartphones

People kept diaries. Writing forced reflection. Memory was built intentionally.

Smartphones arrived

We started capturing everything — photos, notes, messages. Data exploded.

Today

The average person has 10,000+ photos and can't describe last Tuesday. More data. Less memory.

Evidence of Life gives intentionality back to memory.

THE PROBLEM

Life is happening. Memory is failing.

📸

Capture without context

Photos and notes pile up with no emotional or situational context. In three months, they're meaningless fragments.

😰

Tools that feel like work

Notion, spreadsheets, bullet journals — all require setup and discipline that most people don't sustain past two weeks.

🌀

No reflection layer

There is no tool that connects what you did, how you felt, and where you were into a coherent, searchable life story.

WHY NOW

Three forces are converging right now.

01

AI is ready

LLMs can now classify moods, auto-tag content, and surface patterns from personal data — at near-zero cost, in real time. This was not feasible two years ago.

02

Self-reflection is mainstream

The global journaling market grows ~20% YoY. Mental health awareness has made self-tracking culturally normal, especially for Gen Z and Millennials.

03

Digital amnesia is real

Studies show outsourcing memory to devices reduces recall. People are starting to notice they can't describe their own year. The pain is visible — and unsolved.

OUR SOLUTION

Evidence of Life

A personal life OS that makes it effortless to capture, reflect on, and rediscover your days.

CAPTURE

Log a moment in under 10 seconds — text, photo, emoji, location, or voice. No templates, no required fields, no friction.

REFLECT

AI classifies your moods, auto-tags entries, and surfaces daily and weekly patterns you hadn't consciously noticed.

REDISCOVER

Browse your life as a map, a calendar, or a chat. Ask the AI: "What made me happy last month?" and get a real answer.

THE PRODUCT

One app. Five interlocking systems.

Moments

Quick-capture entries: text, photo, mood emoji, GPS location, and auto-tags in one tap.

Calendar

Month/week/day views of your entire life. Google Calendar sync + ICS import.

AI Layer

Auto-tagging, mood classification, smart chatbot, voice input, and date parsing — AI woven throughout every feature, not bolted on.

Map & Heatmap

Every logged location on an interactive Leaflet map with a heat layer showing where you spend time.

Todos + Timer

Task management with a built-in Focus Timer. Work and personal life tracked in one place.

HOW IT WORKS

From moment to memory in three steps.

1

Capture

< 10 seconds

Open the app. Type a moment, snap a photo, or record your voice. Add a location if you want. No setup, no required fields. Done and closed.

2

AI enriches it

Automatic

The AI auto-tags the entry (work, social, health, travel), classifies your mood, links it to your calendar, and stores it with full context.

3

Reflect & discover

Daily / Weekly

Return to your Plan/Recap view, explore your life on a map, or ask the chatbot: "What made me happy last month?" — and actually get an answer.

COMPETITION

The status quo is fragmented. We connect the dots.

	Moments	AI Tags	Map View	Calendar	Tasks	Reflection
Evidence of Life	✓	✓	✓	✓	✓	✓
Apple Note	✓	✗	✗	✗	✗	✓
Notion	✓	✗	✗	✓	✓	✗

USER RESEARCH

50 interviews. One clear signal.

50

user interviews
conducted over 3 months

82% said existing tools felt like "too much work" to maintain consistently

74% wanted to remember emotional context — not just what happened, but how they felt

68% had tried and abandoned at least 2 different journaling or life-tracking apps

91% were interested in AI that could surface patterns in their own data

** Percentages are directional estimates derived from qualitative thematic analysis across all interviews.*

IN THEIR OWN WORDS

> *I have 12,000 photos on my phone and I genuinely cannot tell you what happened to me last month.*
>
> — User interview, 24, graduate student

> *I've tried Notion, Apple Note, and actual paper journals. I always stop after two weeks because it starts feeling like homework.*
>
> — User interview, 29, designer

> *I just want something that remembers my life for me, and then shows me who I was.*
>
> — User interview, 31, product manager

TRACTION

Early signal. Real users. Accelerating.

50+

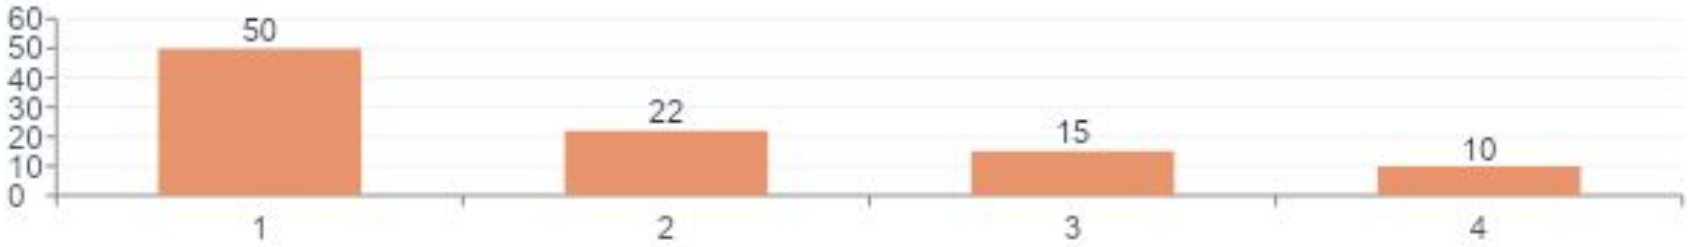
Feature complete

moments, map, calendar, AI

The research-to-build pipeline — showing how momentum built over the semester:



BUSINESS MODEL

Freemium SaaS.
Low friction to start, high value to stay.

Free

$0

forever

- ✓ 30 moments per month
- ✓ Basic calendar view
- ✓ Map view (last 30 days)
- ✓ Text + photo capture

Pro

$4.99

/ month

- ✓ Unlimited moments
- ✓ Full AI layer — auto-tag, mood, chatbot
- ✓ Full map & heatmap history
- ✓ Voice input + Google Calendar sync
- ✓ Plan / Recap mode + energy curve

Premium

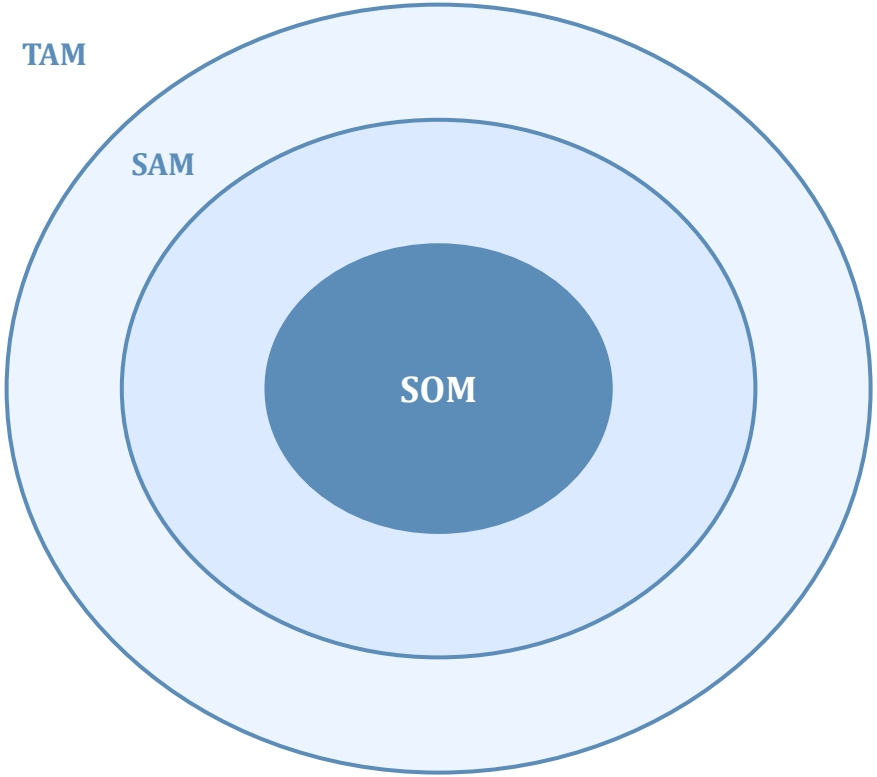
$9.99

/ month

- ✓ Everything in Pro
- ✓ Weekly AI memory summaries
- ✓ Data export (PDF, JSON)
- ✓ Priority support + early access
- ✓ Advanced analytics dashboard

MARKET SIZE

Bottom-up: starting with people who already journal



TAM — Global personal journaling & life-tracking market

~$1.8B

~300M adults globally journal or use tracking apps × $6/yr avg

SAM — English-speaking, 18–40, smartphone users who journal

~$180M

~50M users × $36/yr avg willingness to pay

SOM — Reachable via product-led growth, Year 1

~$150K ARR

50K users × 5% paid conversion × $60/yr (Pro plan)

ROADMAP

Shipping fast. Building for depth.

NOW
Q2 2026

- Public beta launch
- Mobile PWA
- Onboarding flow
- Core AI features

NEXT
Q3 2026

- Native iOS app
- AI memory summaries
- Opt-in sharing
- Analytics dashboard

PLANNED
Q4 2026

- Android app
- API + integrations
- Premium tier launch
- Partner pilots

VISION
Q1 2027

- Family/shared spaces
- AI life coach mode
- Physical export
- B2B wellness

THE ASK

Help us bring this to more people.

Beta Users

We are onboarding our next 50 users. If you track your life in any way — digital or analog — we'd love you to try it.

Feedback

UX critique, edge cases, feature requests. What would make you genuinely use this every day? We want to know.

Network

Introductions to potential users, advisors, or anyone building in personal AI, productivity, or mental wellness.

What 50 conversations taught us.

Capture friction

41/50 mentioned

The number-one reason people quit journaling apps is setup cost and daily friction. Users want sub-10-second capture, or they won't do it at all.

Emotional context

37/50 mentioned

People don't just want to log what happened. They want to remember how they felt — but photos and bullet points don't capture that texture.

App abandonment

34/50 mentioned

Most participants had tried 2+ apps and abandoned each. The pattern: works for 2 weeks, then becomes a burden and gets deleted.

AI curiosity

45/50 mentioned

High interest in AI that analyzes their own data. Phrased as: 'I want something that notices things about me that I miss myself.'

Privacy concerns

28/50 mentioned

A third of users wanted explicit reassurance that their life data is private, not used for ads, and not fed into model training without consent.

Visual memory

31/50 mentioned

Many users wanted a map or timeline — 'to see where my year actually went' — not just a reverse-chronological list of entries.

Modern, scalable, and built to ship fast.

Frontend

- React 18 + TypeScript
- Vite build tool
- Tailwind CSS + shadcn/ui (Radix UI)
- React Router v6 + TanStack Query

Backend & Data

- Supabase (PostgreSQL)
- Supabase Auth — Google OAuth + Demo mode
- Supabase Storage (photo uploads)
- Row-level security (RLS) on all tables

AI & Smart Features

- Auto-tagging (autoTag.ts)
- Mood classifier (moodClassifier.ts)
- Smart chatbot (SmartChatbot.tsx)
- Voice input + date parsing from text

Maps & Visualization

- Leaflet + leaflet.heat heatmap
- Recharts (energy curves, mood charts)
- React Hook Form + Zod validation
- date-fns for all date operations
