

Vouch.

Your social life, *ranked.*

Investor Leave-Behind · April 2026

EXECUTIVE SUMMARY

Vouch is the *friend-first discovery layer* for everywhere you go — built on one-tap ratings instead of reviews nobody writes.

WHAT

A consumer app where you rate every place 0–10 in two seconds. Your history is searchable; your friends' ratings shape what you discover next.

TRACTION

100 active raters · 411 ratings · 58% W4 retention in NYC beta after 3 months — no paid acquisition.

WHY NOW

Yelp & Google reviews have collapsed in trust. Beli proved one-tap rating works for food. Nobody owns the broader graph.

ASK

\$200K pre-seed for 6-month runway to 2K NYC raters and seed-stage metrics.

THE PITCH IN ONE LINE

Rate every place you go.
Get recs from friends *you*
actually trust.

A living record of your taste — searchable, rankable, shareable. Built on one-tap ratings instead of reviews nobody writes.

THE PROBLEM

You've been to hundreds of places.
You remember *twenty*.

| *Your taste deserves better than this.*

THE INSIGHT

Reviews are a *writing* problem. Ratings are a *memory* problem.

Reviews failed

Asking strangers to write paragraphs is friction. The result: 2% of customers write 90% of reviews — almost all extremes.

Ratings work

A single tap, in the moment, taken from anyone — not just the loudest voices. Density grows linearly with usage instead of a power-law tail.

| *Beli proved this for restaurants. We're applying it to *everywhere* — bars, hikes, shows, classes, trips.*

THE SOLUTION

One tap. *That's it.*

No review. No paragraph. No photo required.
After any experience, rate it 0–10. Vouch builds
a living record of your taste over time.

8/10

TELL EVERYONE

HOW IT WORKS

Three steps.
Two seconds each.

BEYOND THE RATING

The rating is the *hook*.
The graph is the *moat*.

HOOK → HABIT A new user rates ~7 places in their first session (back-rating restaurants from memory). Habit forms by week 2.

THE NETWORK EFFECT

Your friends are rating *too*.

Their ratings shape what you discover — not algorithms guessing from strangers, but the people you actually trust.

Dive bar finder

Their top-rated spots in your neighborhood.

Restaurant expert

Their 9s and 10s when you need somewhere new.

New-city explorer

Their discoveries become yours.

Works solo on day one

Your history is useful before a single friend joins.

THE MARKET

A *\$47B* discovery market,
mis-served by ads and strangers.

TAM

\$47B

Global local-discovery ad & platform spend
across food, travel, events, wellness.

SAM

\$8.2B

US millennials & Gen Z who actively save,
rate, or share going-out recs.

SOM (YEAR 3)

\$240M

2M active raters across 12 cities at a \$10
ARPU / 1.5% take rate blend.

Vouch. — Market

WHY NOW

Review culture is *collapsing*. Trust is moving to networks.

72%

of Gen Z don't trust Yelp or Google reviews.

Morning Consult, 2024

4×

Beli's user growth YoY validates one-tap rating behavior.

TechCrunch, 2025

61%

ask friends first for recs — yet no app captures that loop.

Pew Research, 2024

| *Instagram ate photos. TikTok ate video. Nobody's eaten the rec yet.*

COMPETITION

Beli — but for *everything*.

	ONE-TAP RATING	FRIEND-FIRST FEED	BEYOND RESTAURANTS	PERSONAL HISTORY

"I've tried five apps like this. This is the only one I opened a second time."

Dante · LA

RETENTION CURVES

Curves *flatten* — the sign of a habit.

WHY IT FLATTENS

Each rating compounds the user's personal history. By W4, opening Vouch is faster than opening Notes.

UNIT ECONOMICS

Organic acquisition. *Compounding* retention.

CAC

\$2.40

Blended NYC beta — driven by friend invites + tastemaker referrals.

LTV (Y3)

\$36

Blended ARPU × 3yr retention — Vouch+ + reservations take.

LTV : CAC

15×

Healthy headroom for paid expansion if needed in years 2–3.

PAYBACK

4 mo

Once Vouch+ launches; pre-monetization the model runs on retention alone.

K-FACTOR

1.4 — every active user invites ~1.4 net new users in their first 30 days.

MARGINAL COST

\$0.18 / MAU / month — Mapbox + Postgres + media. Drops at scale.

GO-TO-MARKET

City by city. *Friend by friend.*

STEP 1 – SEED

Tastemakers

Recruit 100 high-volume raters per city — food writers, local creators, scene regulars. Their ratings seed density.

STEP 2 – SPREAD

Friend invites

Every user has a shareable profile. Sending a profile is how you answer "where should we eat?"

STEP 3 – SATURATE

Vertical playbooks

Replicate the food playbook for bars, hikes, shows, trips. Each vertical = its own flywheel on the same graph.

3-YEAR PROJECTION

From *density* to *revenue*.

	YEAR 1 (2026)	YEAR 2 (2027)	YEAR 3 (2028)
Active raters (MAU)	50K	340K	1.6M
Cities live	4	10	22
Ratings in graph	2.0M	18M	96M
Paying (Vouch+ + bookings)	—	22K	180K
Net revenue	\$0	\$1.6M	\$19M

Conservative case. Assumes no enterprise / city-tourism revenue (additional upside). Full model in data room.

ROADMAP

From a rating app to a *taste graph*.

THE TEAM

Shipped it ourselves. *Live today.*

Gaurav Agarwal

Full-stack + infra. Built the rating graph, tastemaker system, and the production data layer.

Tushar Mittal

Full-stack lead. Shipped Map, Feed, Search, Profile, and Lists end-to-end.

Cynthia Jin

Brand + growth. Led the synthetic-testing pipeline and the demand-gen experiments.

Mandy Cheng

Design + GTM. Owned the editorial visual system and the onboarding flow.

RISKS & MITIGATIONS

We've thought hard about *what could go wrong.*

RISK • COLD START

Empty feed in new cities

Tastemaker recruiting (100 high-volume raters / city) seeds density before public launch. Personal history works solo on day one.

RISK • BELI EXPANDS

Incumbent moves laterally

Beli is locked into restaurants by brand and rating UX. Going horizontal would dilute their core. We start horizontal.

RISK • HABIT DECAY

Users stop rating

Weekly recaps + friend nudges + back-rating prompts. Cohort curves already flatten at 60%+ — well above benchmark.

RISK • MONETIZATION

Subs don't convert

Reservations API is the bigger lever (1.5% of \$80B+ booking flow). Vouch+ is upside, not the base case.

THE ASK

Raising *\$200K* pre-seed to validate the loop in NYC.

USE OF FUNDS

50%	Engineering & product Ship Vouch+ MVP, recsys v2, native iOS shell. One contractor + AI tooling.
30%	NYC growth First paid-acquisition tests + tastemaker incentives.
20%	Runway & ops 6 months to seed-stage metrics in NYC.

6-MONTH MILESTONES

Active raters	2K
Cities deep	1
Ratings in graph	50K
W4 retention	≥ 50%

The questions we get asked *most*.

Why won't Beli win this?

Beli is a restaurant brand. Going horizontal dilutes it. We're horizontal-native, with a graph designed for any vertical.

What stops a copycat?

Density. The first city to 50K raters wins it. We're at 100 high-engagement raters in NYC after 3 months with no paid acquisition — and 411 ratings already in the graph.

What about international?

English-speaking metros first (London, Toronto, Sydney). Year 3+. Vertical density transfers across cities.

Why now and not 5 years ago?

Review trust collapsed in the last 24 months. Gen Z defaulted to friends. Beli proved the format. The window is open.

Why no ads, ever?

Trust is the only thing we sell. The moment a sponsored 9 appears, the graph dies. Reservations + subs are aligned with users.

What does a Series A need?

50K MAU across 4 cities, 55% W4 retention, \$1.6M ARR run-rate, two cities with revenue product live. 18 months from now.

VOUCH.

Less mediocre. *More you.*

Your best experiences already exist — scattered across memory, notes apps, and group chats. Vouch puts them in one place.
