Tripable Pitch Deck

Plan Together. Travel Together.

Elizabeth Lu · Luke Liang · Rebecca Zhao · Thai On

March 2026

Young Travelers want shared Experiences...

More people want to travel together, but group trip planning still happens in tools that were not designed for group decisions.

~5 trips/year

taken by Millennials
& Gen Z in 2023

42% GenZ

travel to spend time
with friends

40% Millennials

plan a group trip in
next 12 months

66% travelers

more interested in
travel than pre-COVID

<https://www.mckinsey.com/industries/travel/our-insights/the-way-we-travel-now>

**... but the
planning
workflow has
not caught up.**

Why Now?

Group Travel is Rebounding

Young adults are prioritizing shared experiences after the pandemic

Travel planning remains fragmented

Discovery, scheduling, decisions, itinerary, and expenses still live in separate places.

Digital Collaboration is now normal

This generation already uses Notion, Figma, Google Docs, shared calendars, and real-time collaborative tools

The market is not waiting for another itinerary app.
It is waiting for a group coordination layer.

Problem

1. Decisions Disappear

Airbnb links, restaurant ideas, budgets, and votes get buried in hundreds of messages

2. One person becomes the unpaid travel agent

The organizer collects everyone's preferences, checks availability, makes the plan, and chases people for answers.

3. Schedule alignment is painful

Comparing availability across 6+ people requires multiple back-and-forth exchanges.

4. Expense tracking is an afterthought

IOUs live in messages and cause awkward follow-ups

The group chat was never built to plan a trip.

"The group chat becomes chaos once everyone starts sending Airbnb links."
- Tripable Interviewee

Target Customer

Beachhead: college and graduate students planning social trips

Primary Users:

College Students

18-24 yrs

- Highly social and already planning group activities
- Comfortable with collaborative tools
- Concentrated on campuses, making distribution more efficient
- Naturally viral because each trip requires inviting multiple friends

Secondary Users:

Young Professionals

25-30 yrs

- Plan weekend trips, weddings, reunions, overseas trips
- Higher disposable income
- Have higher willingness to pay for convenience

Defining Behavior

Planned a group trip

OR

Watched a friend do all the planning

→ Solution

Collect ideas, Vote, Decide

Group members add destinations, stays, restaurants, activities, and links into one shared space so ideas do not disappear in chat. They can vote for what they like in the same space to help drive group decisions.

Align Dates

Members add availability, and Tripable highlights the best overlapping windows so the group can choose dates faster.

Align Dates

Collect Ideas

Vote and Decide

Build the Itinerary

Track Expenses

→ Solution

Track Expenses

Shared expenses stay connected to the trip from the beginning, reducing awkward follow-ups after the trip.

Build the Itinerary

Approved can be added to a custom day-by-day itinerary with responsibilities and timing attached.

Align Dates

Collect Ideas

Vote and Decide

Build the Itinerary

Track Expenses

Competition

Today's workflow is a patchwork of single-purpose tools.

Tool	What it does	Why it breaks for group trips
Messaging Apps	Conversation	No structure
Google Docs/Sheets	Shared Notes	Manual planning, no functionalities
Doodle/When2Meet	Availability	Scheduling only
Splitwise	Expenses	Tracking spending only
Wanderlog/TripIt	Itinerary	Solo traveler first, no group decision making
Tripable	End-to-end Group Workflow	Collaborative trip planner

Competitor Analysis

Our Wedge

- Group-native from the start
- Decisions and votes are part of the workflow
- Availability, itinerary, and expenses stay connected
- The product is designed for participation, not just organization

Validation

47

User Interviews
conducted

100%

Described group trip
planning as "messy"
or "slow"

78%

Would adopt a
dedicated app

3

Pilot groups actively
testing prototype

"Planning the trip is harder than the
trip itself."

- Graduate student, NYU

"Someone always ends up doing all
the planning and resenting everyone
for it."

- Undergraduate, Columbia

Business Model

Freemium entry. Premium planning when the trip gets serious.

Free

- basic calendar
- basic voting
- basic itinerary
- basic expense tracking

Premium

\$4.99 / month or \$9.99 / trip

- AI itinerary suggestions
- unlimited voting and polls
- Advanced expense tracking
- Shared budget planning
- Exportable itinerary

Go-To-Market Strategy

Phase 1

- Launch on 5 campuses
- Partner with student organizations, travel clubs, Greek life, and international student groups
- Recruit 1 campus ambassador per university
- Push free trip hubs for spring break, winter break, and weekend trips

Phase 2

- Every trip invites non-users into the product
- Referral credits for groups that complete trips on Tripable
- Expand to 50 campuses
- Begin targeting young professionals in major cities

Phase 3

- Affiliate partnerships with Airbnb, KAYAK, GetYourGuide, and activity platforms
- Travel agencies and group travel coordinators
- International expansion to the UK, Canada, and Australia

Our Team

4Cuz

Elizabeth Lu

- M.S. Computer Science, Columbia University; B.A. Computer Science & Economics, NYU
- Experience in machine learning, product strategy, and customer discovery

Luke Liang

- M.S. Computer Science, Columbia University
- Background in software engineering, systems design, and full-stack development
- Experience building technical architecture and implementing product features

Rebecca Zhao

- M.S. Computer Science, Columbia University
- Background in design, UX, and software development
- Experience creating user-centered product flows and interfaces for student-facing tools.

Thai On

- M.S. Computer Science, Columbia University
- Background in operations, partnerships, and product execution
- Experience supporting go-to-market planning, outreach, and team coordination
