Growth Strategy Doc — Part 1

Product Overview
Rekindled is a social discovery app that helps users find events and meet new people based on shared interests. Users can swipe through events and connect with others attending, making it easier to turn online discovery into real-world social interaction.

Target Audience
The target audience is individuals aged 18–35 who are interested in meeting new people, attending social events, and expanding their social circles. This includes college students, young professionals, and individuals new to a city who are actively seeking social opportunities.

Acquisition Channel 1: Short-Form Content (TikTok & Instagram Reels)

Approach
We will create engaging short-form videos that showcase the experience of using Rekindled. Content will include clips of users swiping through events, attending real events, and meeting new people. We will focus on relatable hooks such as “How to meet people in a new city” or “POV: You actually found a fun event tonight.” Content will be posted consistently (1–2 times per day), leveraging trending sounds and formats to maximize reach. We will also include clear calls to action directing users to download or try the app.

Success Metrics
Success will be measured by:

- Number of views and engagement (likes, shares, comments)
- Click-through rate to the app
- Number of new user signups attributed to social media traffic

---

Acquisition Channel 2: Campus & Local Community Seeding

Approach
We will partner with college organizations, clubs, and local event hosts to seed initial users. This includes reaching out to student groups, event organizers, and community leaders to promote Rekindled as a tool for increasing event attendance and engagement. We may also offer incentives such as early access perks or featured event placement to encourage adoption. Initial focus will be on dense social environments (e.g., college campuses or urban areas) where network effects can grow quickly.

Success Metrics
Success will be measured by:

- Number of users acquired through partnerships
- Number of events created or joined through the app
- Activation rate (users completing onboarding and reaching the feed)

Acquisition Channel 3: Referral & Word-of-Mouth Loop

Approach
We will implement a referral system that encourages users to invite friends to join events together. This can include incentives such as unlocking premium features, priority access to events, or enhanced visibility for inviting others. The product itself supports viral growth since users benefit from having friends and others attending the same events. We will emphasize sharing within group chats and social circles to drive organic growth.

Success Metrics
Success will be measured by:

- Number of invites sent per user
- Percentage of users who join via referral
- Retention rate of referred users compared to non-referred users

---

Overall Success Definition
The growth strategy will be considered successful if we achieve consistent increases in user acquisition, strong onboarding completion rates, and evidence of network effects (more users joining events as the user base grows). Key metrics include weekly active users, onboarding conversion rate, and event participation rates.
