

roam

the reels you share, pinned to a map you build together.

TEAM ROAM

ARLEEN ALCARAZ-CANO · DIYA NAIR · DANIEL DAVID · TYLER MANRIQUE · STANLEY OMONDI

Short-form video is now the new word-of-mouth.

Gen Z discovers places through reels, not reviews.

5–15+

reels/week shared
about places they want to go

0%

of those reels
ever become actual plans

100%

of the resulting
frustration

You see a reel. You think *"I need to go there."*
Then you forget. Every. Single. Time.

WHO HAS THIS PROBLEM

5–15+

reels per week shared by Gen Z about places they
want to go. (estimate from user interviews)

WHAT THEY DO TODAY

Screenshot the reel.

Drop it in a notes app.

Star it on Google Maps.

When you're free, you have no idea what to do.

Three forces converged.

1

Video is the default discovery layer

Reels, TikToks, and Shorts have replaced Yelp for Gen Z. The place-finding behavior is real — it just lacks infrastructure.

2

AI extraction is finally fast enough

Multimodal models can now parse frames, captions, and overlays in under 3 seconds — making real-time reel-to-pin possible.

3

Maps as social objects are mainstream

BeReal, Snap Map, Google's collaborative lists — the habit of sharing location-based content with friends is already normalized.

Share the reel. *We do the rest.*

1

Share

Tap share → Roam from Instagram or TikTok.

2

Extract

AI reads the frames, captions, and metadata.

3

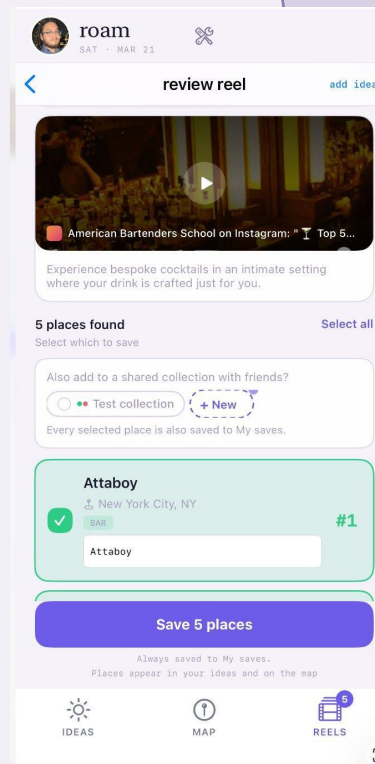

Resolve

Each candidate matches to a real Google place.

4

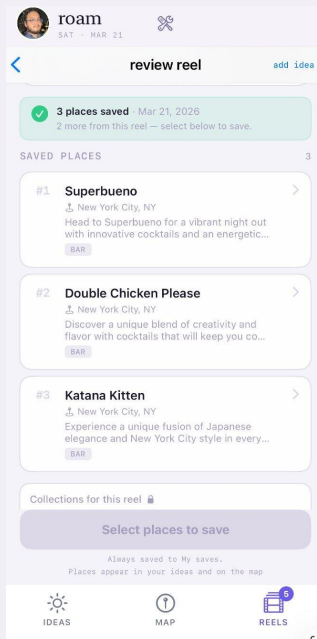

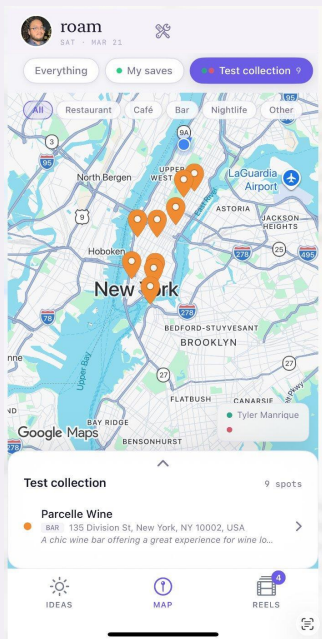

Pin

One tap saves it to your map and your friends'.

AI extracted 5 bars from one reel

A working MVP. In production, on iOS, today.

REEL → MAP PIPELINE

Share sheet, AI extraction, candidate review, location override — all live.

SHARED COLLECTIONS

Personal map plus collections you build with friends. Each contributor color-coded.

ALSO BUILT, FLAGGED OFF

Full event coordination — invites, RSVPs, calendar — hidden behind a feature flag.

No one owns the reel-to-place layer.

TOOL

WHAT IT DOES

WHAT IT MISSES

Google Maps

Save + star places

Can't ingest video; no friend layers

Instagram Saves

Save reels to collections

No location extraction or map view

TikTok Notes

Bookmark for later

Lives inside one app; no planning

Notion / Notes

Manual screenshot + link dump

*Completely manual; doesn't scale***Roam**

Reel → AI → shared map

—

A bit on where we are at.

SIGNAL

- MVP shipped to iOS (waiting on review)
- Reel pipeline works end-to-end
- People who try it say it's cool
- Shared collections feel right

NOISE

- No strong pull, no one asking for access
- Messy usage data
- No clear ICP (ideal customer profile)

Freemium → premium social layer.

Free

\$0

- Up to 30 reels/month
- Personal map
- 1 shared collection

Pro

\$6/mo

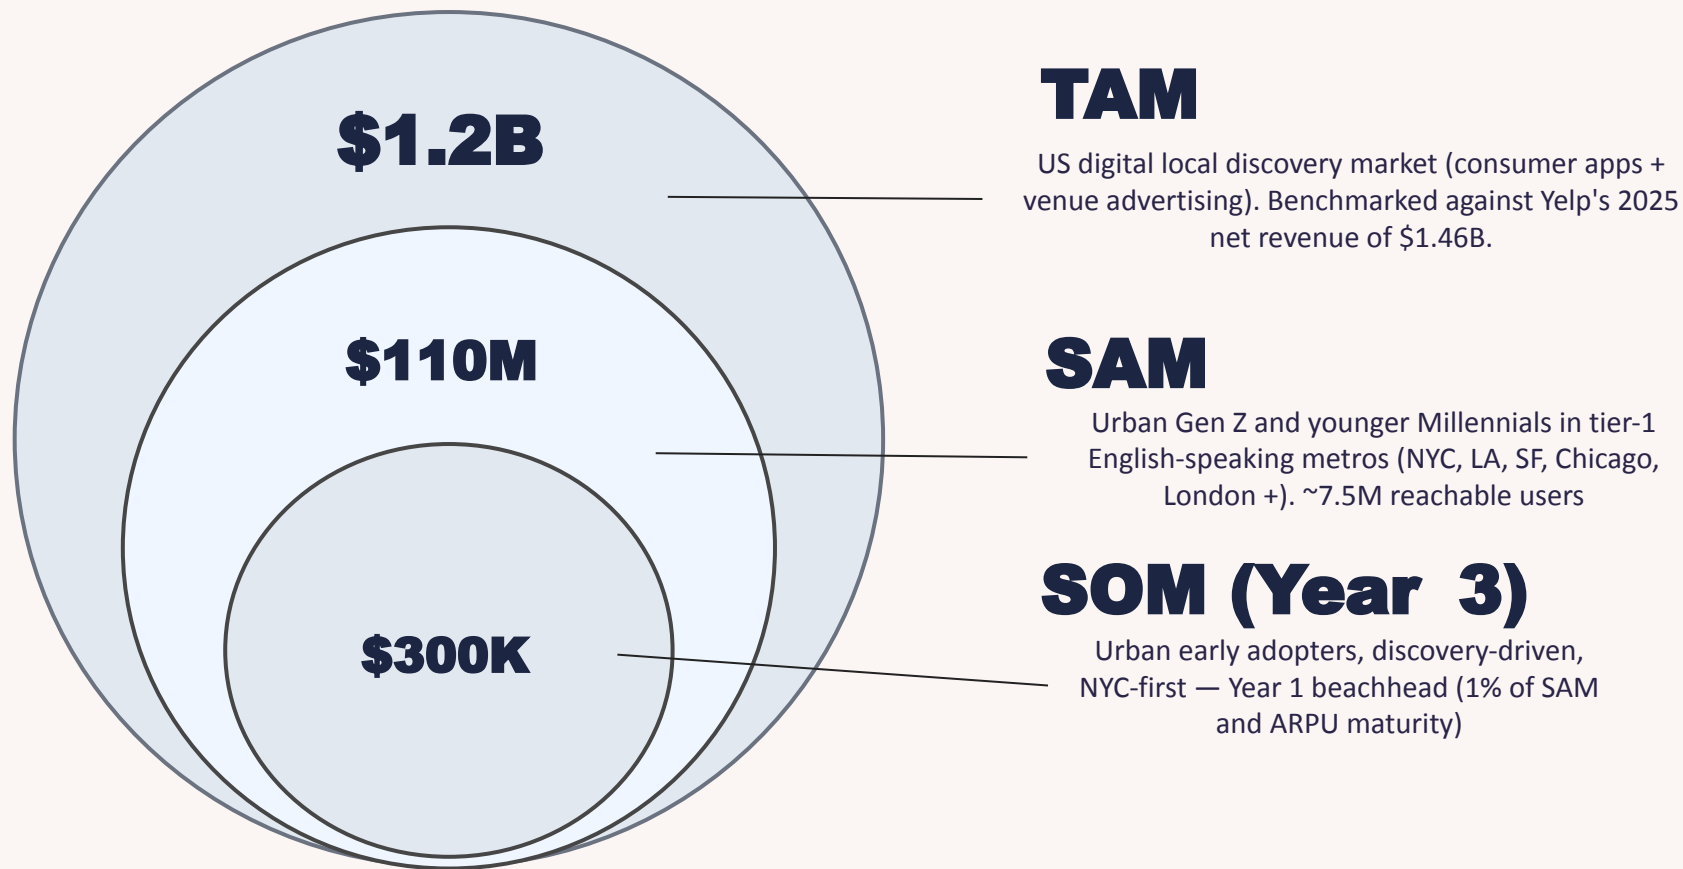

- Unlimited reels
- Unlimited collections
- Priority AI extraction

Group

\$3/person/mo

- Team pricing (3+ members)
- Shared trip planning
- Event coordination

A large market, built bottom-up.
