

FREWEIGHT

The training platform built for coaches who manage real teams.

Andrea Vergara | Nitin Rao | Arin Jaff | Jaclyn Zatsiorsky

Columbia University | 2026

THE WORLD CHANGED

STRENGTH TRAINING SCALED. THE TOOLS NEVER CAUGHT UP.

A decade ago, a strength and conditioning coach managed one team, one program, and one whiteboard. Today the same coach manages five teams, 200 athletes across multiple sports, and 12 individualized programming cycles -- often simultaneously.

The scale of the job changed fundamentally. The tools did not. Coaches are still building spreadsheets, texting athletes their programs, and chasing completion data manually -- while managing more athletes than ever before.

THEN

1 coach | 1 team
1 whiteboard

NOW

1 coach | 5 teams
200 athletes
12 programs
Still on Google Sheets

TEAM

WE ARE ROWERS WHO BUILT THE TOOL WE WISHED WE HAD.

All four founders are Columbia rowers -- two women's varsity, two lightweight. We spent years training inside the exact system we are now rebuilding. We used the spreadsheets. We texted our coaches about injuries through back channels. We did the mental math between sets. We know where this breaks down because we lived it.

PROBLEM

COACHES ARE RUNNING SOPHISTICATED PROGRAMS WITH PRIMITIVE TOOLS.

The modern strength and conditioning coach manages multiple teams, each with individualized programming, injury modifications, and different training phases. The workflow looks like this:

Build the program.

Weeks of work in Excel or Google Sheets, with percentage-based formulas referencing each athlete's maxes manually.

Distribute it.

Share a spreadsheet link or screenshot. Hope everyone sees it. Text it again when they don't.

Track completion.

Chase athletes after every session. No dashboard. No notifications. No record unless someone texts back.

Handle modifications.

An athlete hurt their shoulder. There is no formal channel. They tell a teammate, who tells the coach, maybe.

PROBLEM

ATHLETES ARE LEFT TO FIGURE IT OUT ON THEIR OWN.

The athlete experience is the other side of the same broken system. Without a purpose-built tool, athletes are doing cognitive work between sets that no coach intended.

Mental math mid-workout.

The program says 80% of your squat max. Your max is 215 lbs. What is 80%? Athletes are calculating this between warm-up sets, often getting it wrong, often rounding to something safer and easier.

No way to flag concerns.

"I want to be able to communicate my injuries without going through other sources." Athletes self-modify without telling anyone, which means coaches are programming against data that is no longer accurate.

Programs that do not adapt.

A missed week, a new max, a competition cycle shift -- none of these propagate through a static spreadsheet. Athletes follow stale programs, coaches do not know, performance suffers.

THREE FORCES ARE CONVERGING TO MAKE THIS MOMENT RIGHT.

The personal training market is growing fast.

There are 340,000 certified personal trainers working professionally in the United States -- a 21.5% increase since 2012. The fitness industry projects 10% job growth over the next decade. More coaches means more programs, more athletes, more complexity, and more demand for tools that scale.

College athletics is professionalizing.

NIL has transformed the incentive structure of college sports. Performance is now a recruiting and branding asset. Athletic departments are expanding S&C staffs and expecting more from them. Coaches are managing more athletes than ever -- with no modern infrastructure to support it.

Athletes expect modern tools.

The generation of athletes now in college grew up with Strava, Whoop, and Garmin. They track everything. The gap between the tech they use everywhere else and the tech they use in the weight room has never been wider -- and the contrast is starting to matter for recruiting.

FREWEIGHT ELIMINATES THE SPREADSHEET ON BOTH SIDES.

Freeweight is a two-sided platform: coaches build programs using percentage-based logic, and athletes receive perfectly calculated, personalized workouts automatically. Neither side has to do the math, and both sides stay in sync.

01

Coach builds the program

Sets exercises, sets, reps, and percentages of each athlete's recorded maxes. Written once for the whole team or tailored by athlete.

>

02

Freeweight calculates weights

The app reads each athlete's maxes on file and auto-calculates their exact working weights. No math required by anyone.

>

03

Athlete opens and lifts

Weights are pre-calculated. The athlete logs sets, flags modifications, and records RPE in a few taps.

>

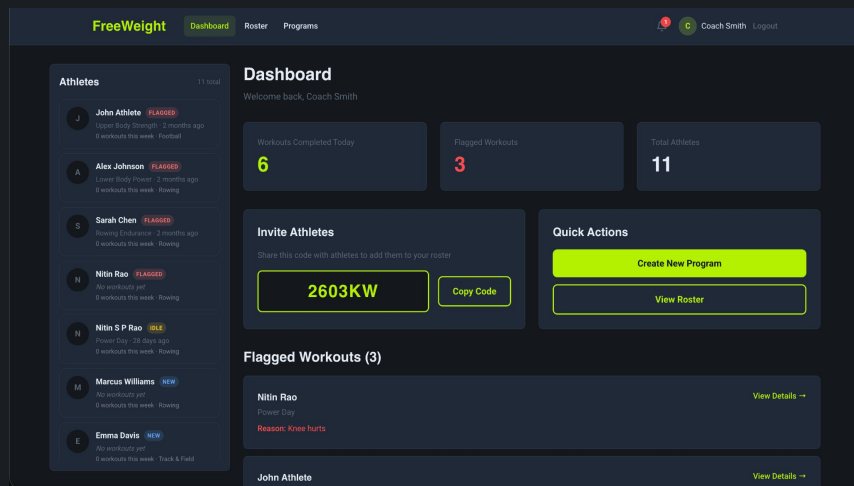

04

Coach sees everything

Completion, modifications, and progress are visible in real time on the coach dashboard. No chasing required.

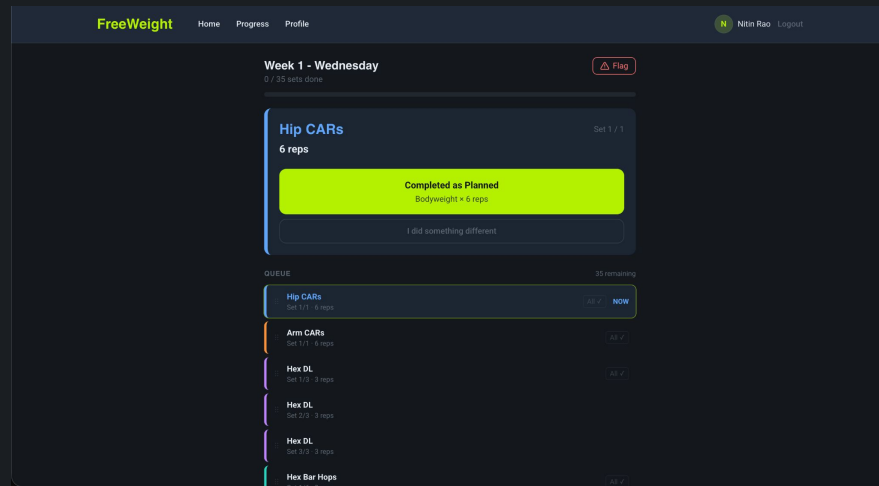

PRODUCT

THE AHA MOMENT: WEIGHTS ARE ALREADY CALCULATED WHEN YOU OPEN THE APP.

Coach dashboard

Live completion view across all teams and athletes.

One-tap logging

Athletes log sets, RPE, and modifications in seconds.

Auto-calculation

Weights derived from recorded maxes, updated automatically.

Injury flagging

Direct channel for athletes to communicate to coaches.

COMPETITION

EXISTING TOOLS SERVE ONE SIDE OF THE RELATIONSHIP, NOT BOTH.

The competitive landscape splits into tools for coaches and tools for athletes, with no product meaningfully serving both. The gap -- specifically the automatic weight calculation and real-time two-way communication -- is where Freeweight lives.

	Team Structure	Auto-Calculation	Athlete App	Real-Time Visibility
Freeweight	YES	YES	YES	YES
TrainHeroic	YES	PARTIAL	LIMITED	NO
TeamBuildr	YES	NO	NO	NO
Consumer fitness apps	NO	NO	YES	NO
Google Sheets + group texts	NO	NO	NO	NO

TRACTION

WE LAUNCHED AT COLUMBIA AND ARE ALREADY LIVE ACROSS FIVE TEAMS.

Freeweight is not a concept. It is running in a real athletic program, with real coaches and real athletes using it in active training cycles.

USER RESEARCH REVEALS THE DEPTH OF THE PROBLEM -- AND THE DEMAND.

Before and during development we conducted structured interviews with Columbia student-athletes across sports. The themes were consistent.

"I want to be able to communicate my injuries without going through other sources."

Columbia athlete, interviewed during user research

"Half the time I just round to something easier. I do not know if it is really 80%."

Columbia athlete, on calculating working weights mid-session

"I do not always follow the program when I am tired. No one checks."

Columbia athlete, on accountability and completion tracking

COACHES PAY. ATHLETES JOIN FREE. THE INCENTIVES ALIGN PERFECTLY.

The model is coach-side SaaS with a free athlete tier. Coaches pay because they extract the primary value: program management, auto-calculation, and completion visibility. Athletes join free because lowering their barrier to adoption directly increases the value delivered to coaches.

COACHES (subscription)

Monthly or annual SaaS fee per coaching staff. Pricing scales with roster size and number of teams. The coach is the decision maker; the purchase is a professional tool purchase, not a consumer spend.

ATHLETES (free)

Free for all athletes, permanently. If athletes do not use the app, coaches have no reason to pay for it. The free tier is not a compromise -- it is the mechanic that makes the business model work.

THE ADDRESSABLE MARKET EXTENDS WELL BEYOND COLLEGE ATHLETICS.

Our initial rollout targets college strength and conditioning programs. But the product is built for anyone who coaches multiple athletes -- which is a significantly larger market.

NCAA D1 S&C

360 schools x 19 teams x \$100/mo

\$8.2M ARR

NCAA D2 / D3 + High School

292 schools x 19 teams + 422 schools x 19 teams +
4,500 schools x 3 teams x \$50/mo

\$24.4M ARR

Certified Personal Trainers

340,000 certified PTs in the US, up 21.5% since 2012,
10% job growth projected next decade

MASSIVE

WE START INSIDE THE INSTITUTION WE ALREADY KNOW.

Our go-to-market strategy is designed around trust and proximity. We do not need to cold sell college athletic programs -- we are already inside one, and we have credibility as athletes who trained inside the exact system we are fixing.

Phase 1: Columbia.

Deepen the pilot. Get to 10 teams, 400+ athletes. Generate completion data, qualitative feedback, and referenceability within Columbia Athletics.

Phase 2: Ivy League.

Coach-to-coach referral. S&C coaches at peer institutions know each other. One satisfied coach at Columbia is a warm introduction to Princeton, Yale, Harvard.

Phase 3: D1 Expansion.

Approach D1 S&C coordinators at broader programs. The pitch is the data from Phase 1 and 2: real programs, real athletes, real results.

Phase 4: Personal Trainers.

A lighter-weight version of the same product -- built for a single PT managing 20+ clients -- opens the largest addressable segment in the market.

WE ARE LOOKING FOR PILOT PARTNERS.

What we are asking for:

- 10 more coaches -- college S&C staff, personal trainers, or anyone managing a real training program -- to pilot Freeweight this semester.
- Introductions to S&C coaches at other Ivy League programs or D1 athletic departments who might be open to a conversation.
- Feedback from anyone who has built, sold to, or coached inside athletic programs at scale.

THE PRODUCT IS BUILT. WE JUST NEED THE ROOMS.
